[More](#)

Given the participants' score sheet for your University Sports Day, you are required to find the runner-up score. You are given  $n$  scores. Store them in a list and find the score of the runner-up.

## Input Format

The first line contains  $n$ . The second line contains an array  $A[]$  of  $n$  integers each separated by a space.

## Constraints

- $2 \leq n \leq 10$
- $-100 \leq A[i] \leq 100$

## Output Format

Print the runner-up score.

## Sample Input 0

```
5
2 3 6 6 5
```

## Sample Output 0

```
5
```

## Explanation 0

Given list is  $[2, 3, 6, 6, 5]$ . The maximum score is 6, second maximum is 5. Hence, we print 5 as the runner-up score.

Python 3

```
1 if __name__ == '__main__':
2
3     n = int(input())
4
5     arr = map(int, input().split())
6
7     print(sorted(set(arr), reverse=True)[1])
8
9
```
